Treehoppers and thorn bugs are members of the family Membracidae, a group of insects related to the cicadas and the leafhoppers. About 3, species of Treehopper: Treehopper, (family Membracidae), any of approximately species of insects (order Homoptera) that are easily recognized by their vertical face. TREEHOPPERS provides online access to unique bibliographic and taxonomic resources for retrieving information on the insect families Aetalionidae. Membracoidea (leafhoppers and treehoppers; Fig. 3), by far the most speciose of the auchenorrhynchan superfamilies, are characterized morphologically by the. A much different insect, the treehopper, has similar sucking mouthparts that can penetrate a tree's bark to eat its sap. Its saliva prevents a tree. Treehoppers have amazing ornamentation. It turns out these striking structures are actually modified wings but no other insect has wings. Treehoppers, a small group of hemipteran insects related to cicadas, have evolved a peculiar morphological structure known as the helmet. Jumping in a species of Australian gum treehopper was analysed from high-speed images. *Pauroeurymela amplicincta* adults and nymphs. SUMMARY. The kinematics and jumping performance of treehoppers (Hemiptera, Auchenorrhyncha, Membracidae) were analysed from high speed images. Funky bugs. The treehopper family Membracidae is a wild and wacky bunch, the lesser known cousins of the less-than-appealing cicada. But our image issues are mere trifles compared to what must be going through the minds of the treehoppers. These are without a doubt nature's. This adventive treehopper from Australia is found in both the North and South Islands of New Zealand. It occurs on host plants in city gardens and parks as well. Treehoppers are surely one of the most curious looking insects encountered by gardeners. They feed on plant sap, like many insects found in. Treehoppers are masters of mimicry. On their backs, these small, odd-shaped relatives of cicadas sport outgrowths called helmets, which. The *Bocydium globulare*, commonly known as the Brazilian Treehopper is a fascinating insect that roams many regions of our world. I would. Last November I posted pictures of some bizarre treehoppers (membracids, a family in the order of true bugs, Hemiptera) that had strange. hopper 2 - *Entylia turrita* *Entylia carinata* hopper 34 - *Tylopelta gibbera* Black Locust Treehopper - *Vanduzee* *arquata* - female Widefooted Treehopper.
